Heat **MANAGER**TM

Works with Any Fuel

The R.W. Beckett Corp.—committed to the industry for over 65 years—is dedicated to producing high-quality oil burners and components that deliver quiet, comfortable, energy-efficient heat for residential and commercial applications. As part of this mission, we are proud to offer the Beckett HeatManager™—a patented microprocessor-controlled device for oil, gas or propane hydronic heating systems. HeatManager reduces fuel consumption by automatically adjusting the burner run pattern to match the system's heat load. It's a smart way to help your customers save money.

The “Brains”
Behind an
Efficient,
Money-Saving,
Hydronic Heating
System

Beckett
Heat **MANAGER**™

Oil, Gas or Propane...

Works with Any Fuel

Guaranteed to Reduce Fuel Consumption 10-20%

Every year, millions of dollars worth of fuel is wasted by heating systems that often run at a higher output level than required by existing weather conditions. HeatManager solves this problem by automatically adjusting burner output as energy requirements change. This not only saves home and business owners money, it also conserves our country's fuel resources.

Short Payback Time

The modest cost of a HeatManager unit (far less expensive than alternative upgrades) is typically recovered in *12 to 24 months*. From that point on, the HeatManager continues to save money year after year—making it a smart, cost-effective investment.

Easy Installation

HeatManager is designed to make installation fast and simple. There is no need to profile a home or building in order to properly adjust the reset controller. HeatManager uses easily installed, plug-in sensors that monitor the boiler's out-flow water temperature and the rate at which this temperature is changing. In most cases, HeatManager can be installed by a qualified technician in only 15-30 minutes. No programming or follow-up visits are required.

Fail-Safe Operation

HeatManager provides worry-free, fail-safe operation at all times, and the system is backed by a 5-year replacement warranty. LED indicators display operating modes.

Versatile

HeatManager can be installed on any new or existing oil, gas or propane burner.

Do Your Customers a Favor

Your customers will appreciate the money they save with HeatManager—and will reward you with loyalty.

Specifications

Mounting:

Any position via molded-on 1/2" electrical fitting

Size:

4"H x 4"W x 2-1/2"D

Operating Humidity:

5% - 95% non-condensing

Power Input:

24/115/220 VAC @ 5W

Control Circuit:

24 VAC/DC, 115/220 VAC

Relay Contact:

10A @ 220/VAC General Purpose

UL Listed, "Energy Management Equipment"
Made in U.S.A.

*Offer Your Customers the
HeatManager Advantage!*
